

SLUXX^{HP} MENOREXX[®]

Same high quality pellet formulation, different sizes

Sluxx HP[®] and Menorexx[®] slug pellets are made using high quality durum wheat flour, an added anti-mould ingredient and a unique EDDS chelating agent. This guarantees the three main criteria for a highly effective slug pellet:

- Highly palatable to slugs
- Uniform pellet size, reduced dust, and a consistent spread pattern
- Durable in wet conditions

	Sluxx HP [®]		Menorexx [®]		
Pellet dimensions (mm)	2.5 x 2 mm		1.75 x 1.8 mm		
Dose rate/ha	7 Kg	5 Kg	7 Kg	5 Kg	4 Kg
Baiting points/m ²	59	42	94	67	53

MENOREXX offers the option to vary baiting point numbers with a lower dose rate. The only true 'mini' pellet available.

- Slugs are random feeders, so a higher number of baiting points means a greater chance of slugs bumping into a pellet rather than your crop.
- A good early season option available in 20 Kg bags. Useful early-on post drilling, when small grey field slugs can be a major cause of crop damage in oilseed rape and winter cereals.
- As slug pressure increases through the season and conditions become more challenging, consider increasing rate or switching to Sluxx HP[®].

When switching between pellet sizes, ensure applicators are appropriately calibrated. The **online Calibration Wizard** can take the hassle out of setting up your spreader.

Fine tune application rate and forward speed with ease.
